AvMAP
SATELLITE NAVIGATION

AvMap was established in 1994, within the TWS Holding, world leader in marine electronic cartography.

Innovation is part of our DNA. In 1985, TWS developed the world's first electronic device able to display a vehicle moving on a map. The first aeronautical navigator launched by AvMap marked the progress of GPS technology for aircrafts.

AvMap has extended its Know-How in Avionic and Marine also to farming and automotive sectors to produce navigation systems that are currently adopted by some of the most important entities at a global level.

From the Italian Headquarter, AvMap controls its branches located in Europe, Russia, Brazil, Tunisia and USA.

For more than 25 years, AvMap produces navigation systems and intelligent electronic devices for B2C, B2B and OEM markets.

FARMNAVIGATOR

A product 100% made in AvMap

Full know-how of each product

Every single product is manufactured in our Italian factory and it is 100% made in AvMap.

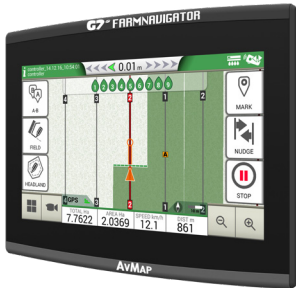

A guarantee of quality

We reach the maximum efficiency and a full control of the development process:

- Research and development
- Engineering
- Hardware design
- Software development
- Manufacturing
- Distribution

Strong customer support

The in-house manufacturing allows us to be flexible during all the stages of production and to have a strong customer care after each sale.

FARMNAVIGATOR

**FARMNAVIGATOR family:
for each need, its solution.**

G7 Ezy Farmnavigator

Parallel guidance and Automatic section control

G7 Plus Farmnavigator

Parallel guidance + Automatic section control
Auto-Steering and Road Navigation

FARMNAVIGATOR

Easiness is our philosophy

Whether you are an expert of precision farming or a complete novice, **G7 Farmnavigator** is the best solution for you. It is a multi-touch console suitable for all levels of expertise:

- Easy to install
- Dust and waterproof
- Extremely Bright LCD display
- Ready-to-go in few minutes
- Large icons on a tactile screen

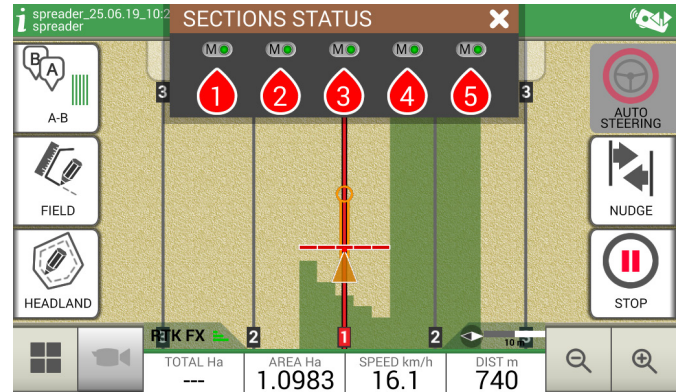

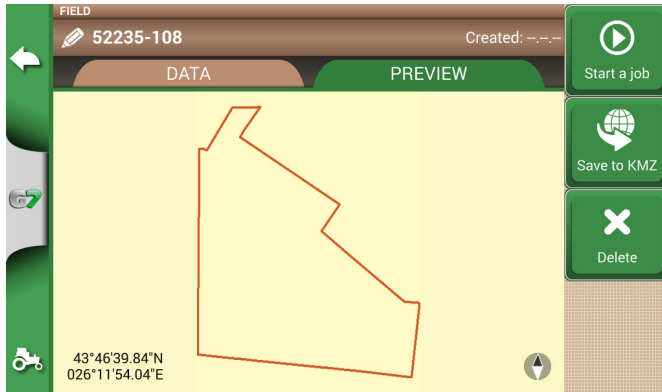

“ Thanks to G7 Farmnavigator I've enjoyed the benefits of satellite technologies in my farm. I've saved time and money! Easy to use, a pleasure every day!

Mario, Italy

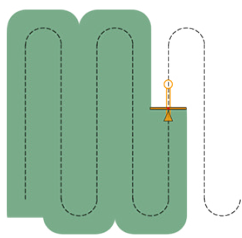

FARMNAVIGATOR

G7 Farmnavigator Your farm just a touch away

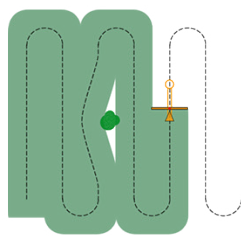

Main features

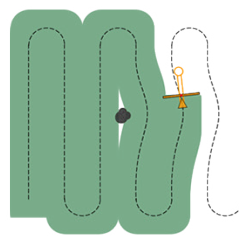

- Follow the lines: AB parallel, contours, adaptive, free, pivots
- Re-work the same field using the same lines
- Manage the headland
- Control sections manually
- Connect an automatic section controller
- Store fields, products and drivers' data
- Store implements with different working width
- Import/Export jobs and visualize it on Google Earth™
- Connect an external Video Camera

“

Fantastic, the installation took very few minutes and after that I was acting like a Pro. Finally I can work precise and faster!

Boris, Russia

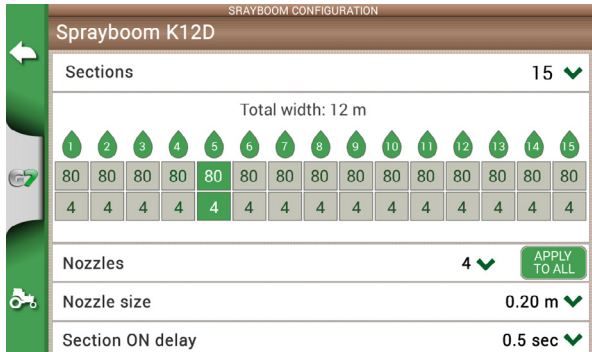

”

FARMNAVIGATOR

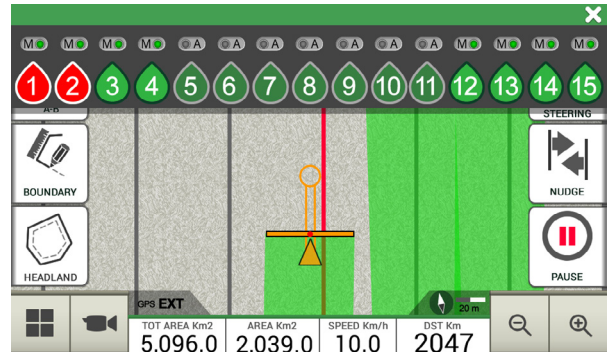

Save time, increase the efficiency

Configure your implements and control them

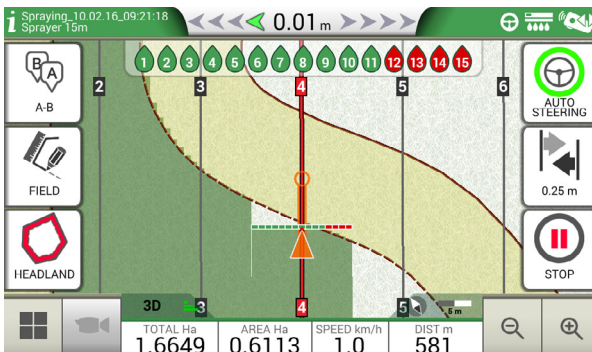

Setup your spray-boom, set the working width or the width of each boom section

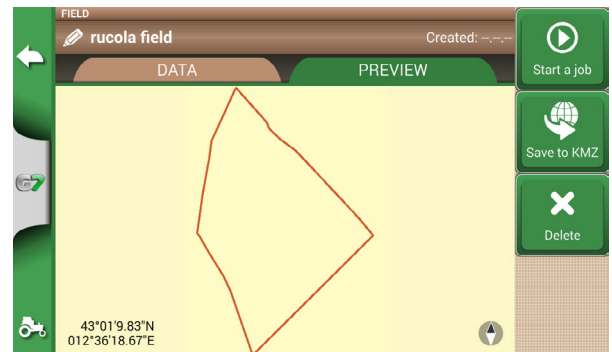

Control sections manually or connect an automatic section controller, more than 10+ third-parts devices, not ISOBUS, already compatibles

Manage the fields and headlands

Create the headland and manage it to avoid unnecessary overlaps

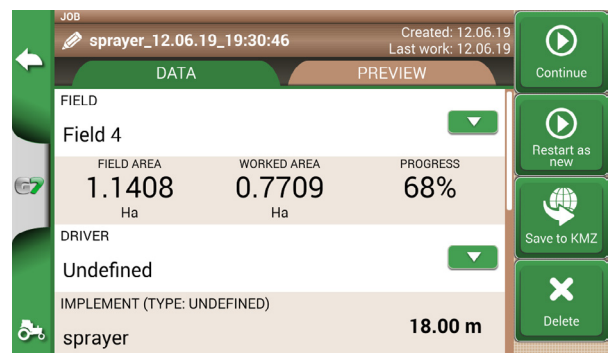

Use RTK to store the area of your fields and re-use the AB lines every year

Save and re-work the jobs

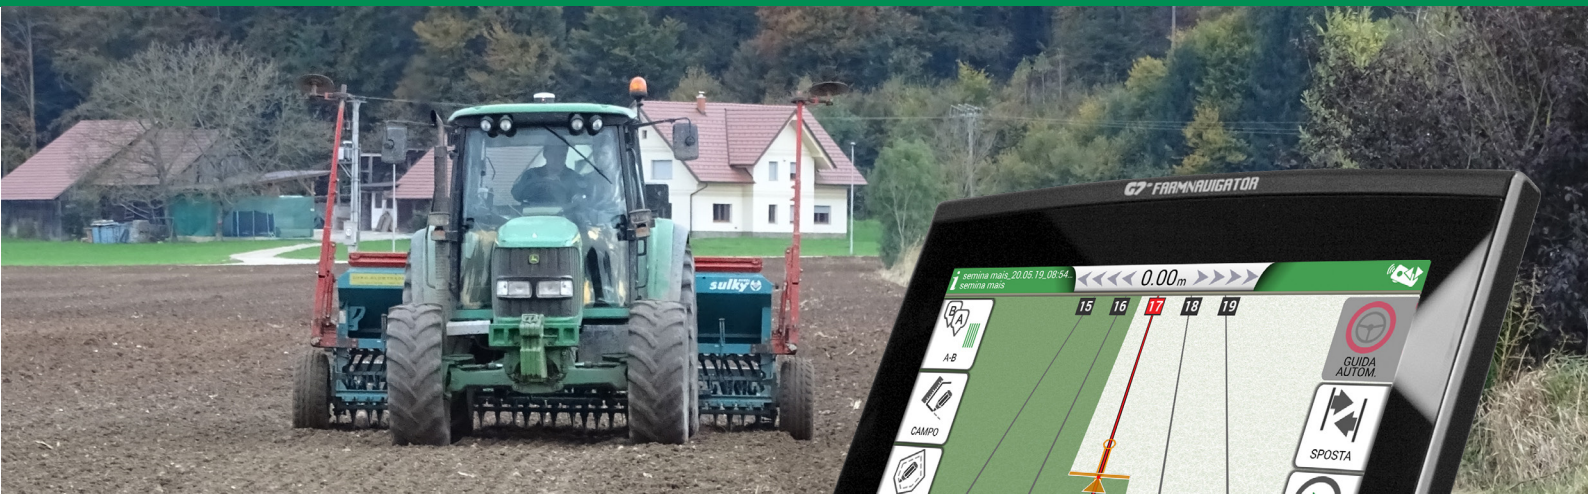

Save your data (farmers, activities, fields, implements, etc.)

Check your data and manage your times and working costs

FARMNAVIGATOR

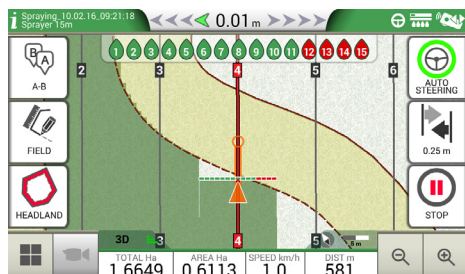

G7 Plus

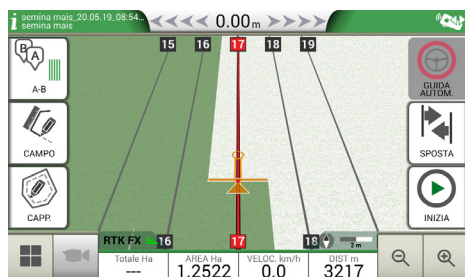

G7 Plus Premium Features

Beyond the main functions, G7 Plus Farmnavigator allows you to exploit other additional features

Auto-Steering

Control the implements instead of worrying about the steering wheel. More than 800 compatible tractors, included tracks, articulated, steer-ready and ISO.

Connectivity

G7 Plus Farmnavigator includes the WiFi technology. Update the software of your device without any effort with WiFi connectivity!

Discover the worldwide maps

Use your G7 Plus Farmnavigator all year round to navigate to your fields or to anywhere else, the HERE maps are included!

FARMNAVIGATOR

Farmnavigator Auto-Steering System

A cost effective Auto-Steering system to increase work accuracy, save fuel and reduce operator's stress and fatigue

Electric motor

- Patented universal ring gear
- Easy to move from one vehicle to another
- Compatible with more than 800 types of tractor
- Silent and very fast, can steer in every type of land

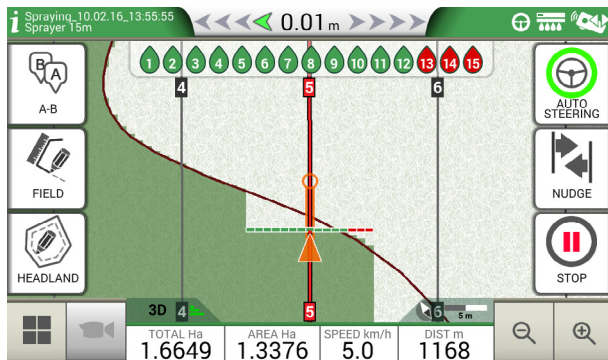

ECU, unit calculation

The compact and versatile steering controller.

- It detects orientation and movement of vehicle
- It receive corrected GPS data from the receiver and converts information from the Farmnavigator to actual steering commands
- Compatible with all types of tractor

FARMNAVIGATOR

All the advantages of Automatic Steering

The Farmnavigator Auto-Steering System allows you using the whole length of your implements, maximizing the crop area and reducing overlapping.

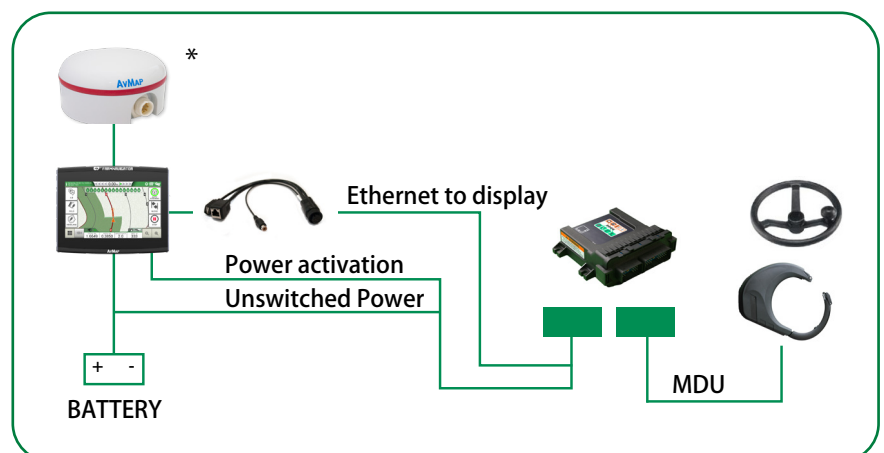

This system saves you time (as the headland maneuvers will be faster) and saves you money, reducing waste of fuel, seeds and fertilizers. This results in a quantitative and qualitative improvement of your crop, and a higher return on investment.

Easy setup and calibration and maintenance over WiFi

Easily configure the ECU following the step-by-step wizard on the G7 Plus Farmnavigator display.

Easy installation and transfer

The smart Mechanical Drive Unit (MDU) is clamped on existing steering wheel without removing it thanks to the patented universal ring gear. It can be easily used on vehicles of different brands and types: tractors, sprayers, spreaders or combiners.

* Receiver not included

GNSS receivers

Choose the precision that best suits your needs

Turtle SMART

- GPS, GLONASS, GALILEO
- SBAS
- L1
- From 4Hz to 10 Hz
- Precision: +/- 30 cm track to track

Turtle GO

- GPS, GLONASS, GALILEO, BEIDOU
- SBAS
- L1
- 10Hz
- Precision: +/- 15 cm track to track

Turtle PRO

- GPS, GLONASS, GALILEO, BEIDOU
- L1L2
- 10Hz
- 2G Modem Embedded
- NTRIP Client
- Precision: +/- 2 cm
- Baseline up to 100Km
- BT wireless technology compatibility (optional)
